- Lead a team of 5 engineers to build a bidding agent for a **battery energy storage system** operator that was trained using **reinforcement learning** that generated 34% more revenue than the benchmark **linear programming** approach. Was responsible for the technical deliverables, project-management, and system architecture.
- Lead the development of a **distributed optimiser** for a turbine OCM. directly lead to +0.4% turbine efficiency (validated by CFD), in 1/20th the time, and half the cost. Optimiser used both **genetic and bayesian methods** and ran on a **GPU cluster** of 20 machines using **Ray**.
- Lead the **data engineering** workstream for a **pharmaceutical clinical-trial site-selection optimization** project. Built a framework that unified the training and inference data-engineering pipeline. The framework reduced the project timeline by one week.
